**THE CENTER FOR COMMUNITY STUDIES TO RELEASE RESULTS OF  
TWO PUBLIC OPINION SURVEYS REGARDING ADVANCED NUCLEAR ENERGY  
GENERATION - NORTH COUNTRY AND CENTRAL NEW YORK RESULTS, AND STATEWIDE  
RESULTS**

---

### **Purpose and Background for these Studies:**

The Center for Community Studies at Jefferson Community College completed its 26<sup>th</sup> Annual North Country Survey of the Community in October 2025. This study is a longitudinal study of quality-of-life in the region measuring attitudes and behaviors among residents and has been completed locally since April 2000. The study is currently fielded each year in Jefferson, Lewis, Oswego, and St. Lawrence Counties. This annual study also involves an omnibus survey component, in that the Center offers the opportunity to local individuals and organizations to suggest survey topics and questions that could be included in the study each year. These additional omnibuses, or add-on, survey items are a free service that the Center provides to local communities and groups. In October 2025, the additional survey topic that has been studied involves new advanced nuclear energy technology with investigation of residents' familiarity, concerns, perceived importance of attributes, levels of support versus opposition of nuclear development, and level of interest in being further educated regarding the new technology. As a follow-up to this Northern and Central New York research, during the first week of November 2025 the Center completed a similar statewide survey of adult residents regarding quality-of-life, including energy generation issues, including participants from all 62 counties in New York State.

In addition to its public opinion survey research activities, the Center has a mission of providing forums for education and discussion of emerging important topics or issues for North Country residents. In partnership with 116<sup>th</sup> Assemblymember Scott Gray, the Center for Community Studies will be hosting a public forum regarding Nuclear Energy on campus on Wednesday evening November 12<sup>th</sup>, from 6:00-8:00 pm in the Sturtz Theater, on campus in Watertown, New York. This forum will address newly developed Advanced Nuclear Energy technologies that could impact or shape the state and local municipalities' electric energy policies and economic development in the years ahead. Specifically, a panel of nuclear energy experts at the forum will explain new technologies, and address safety, waste disposal, economic impact, jobs, the environment, and future electricity prices.

## Highlighted Findings from these Survey Studies:

To support the upcoming nuclear energy public forum at JCC by providing current local and statewide public opinion data, the Center included the following four survey questions regarding nuclear energy in its recent omnibus surveys.

### 1. Have you heard anything at all about Advanced Nuclear Energy generation power plants?

Adult residents in the four-county Northern and Central New York region are slightly more likely to have heard of Advanced Nuclear Energy power generation plants as they are to have not heard (49% versus 42%, respectively) with the largest familiarity with this form of energy generation reported in Oswego and St. Lawrence Counties. Statewide there is significantly less familiarity with Advanced Nuclear Energy generation plants, with only 33% of participants reporting familiarity.

2. Please indicate whether you have concerns with each of the following aspects of an Advanced Nuclear Energy plant if it were to be constructed in the North Country (or, "Oswego County", or "the region of NYS that includes your county"). How concerned would you be with:

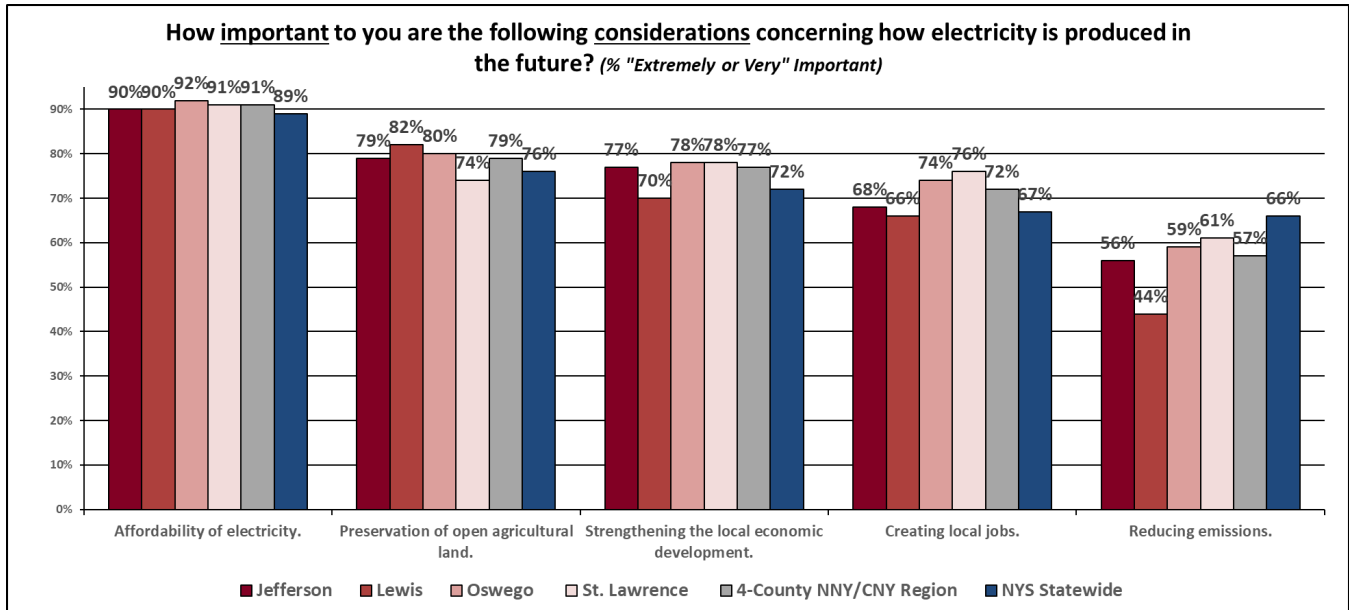

- The impact on long-term electricity rates?
- The handling of spent fuel?
- Safety for local residents?
- The dependability of the power supply?

Among four potential concerns that were studied, clearly the aspect of an Advanced Nuclear Energy power plant that is of most concern to Northern and Central NY residents is a pocketbook issue – concern with the impact on long-term electricity rates, with 61% of participants expressing that they are very or somewhat concerned with future rates. Statewide, concern with long term electricity rates is found at a similar 64% rate, however, when residents of the entire state are sampled, there is a much higher percentage of adults who express concern with the handling of spent fuel than was found in Northern and Central NY (69% versus 52%, respectively) and concern with safety for local residents (58% versus 44%, respectively).

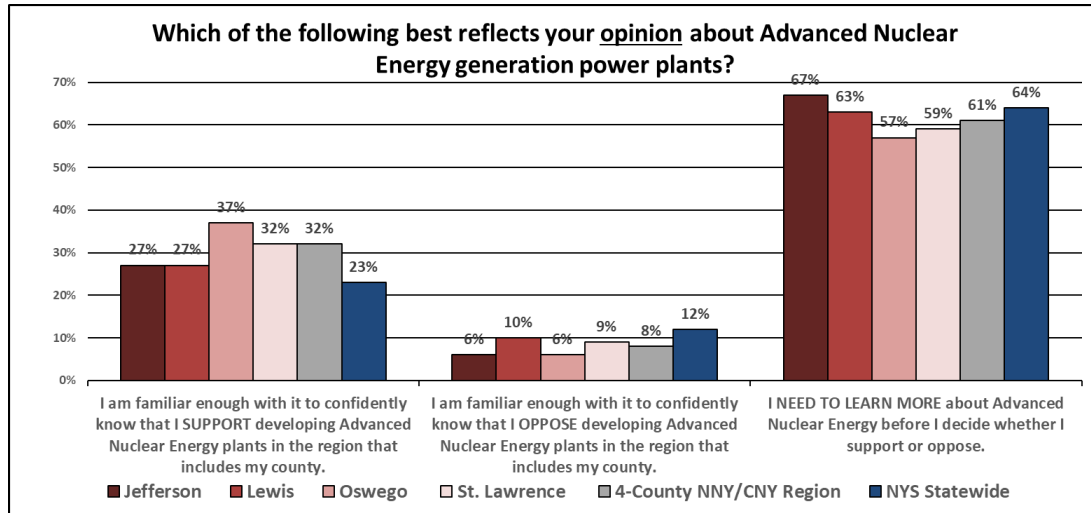

3. How important to you are the following considerations with how electricity is produced in the future?

- a. Affordability of electricity.
- b. Preservation of open agricultural land.
- c. Strengthening the local economic development.
- d. Creating local jobs.
- e. Reducing emissions.

Among five studied considerations, or potential positive impacts of Advanced Nuclear Energy generation, clearly the aspect of an Advanced Nuclear Energy power plant that is of most importance to residents is a personal economic issue - importance of the future affordability of electricity. A very large 91% of Northern and Central NY participants express that this consideration is "extremely or very" important to them (60% responded "extremely", 31% responded "very", while 0% responded either "not too" or "not at all" important), and similarly, on a statewide basis 89% of participants express that this consideration is "extremely or very" important to them. Reducing emissions is of least importance to residents of Northern and Central NY with only 57% responding "extremely or very" important, while this rate is higher, at 66%, on a statewide basis.

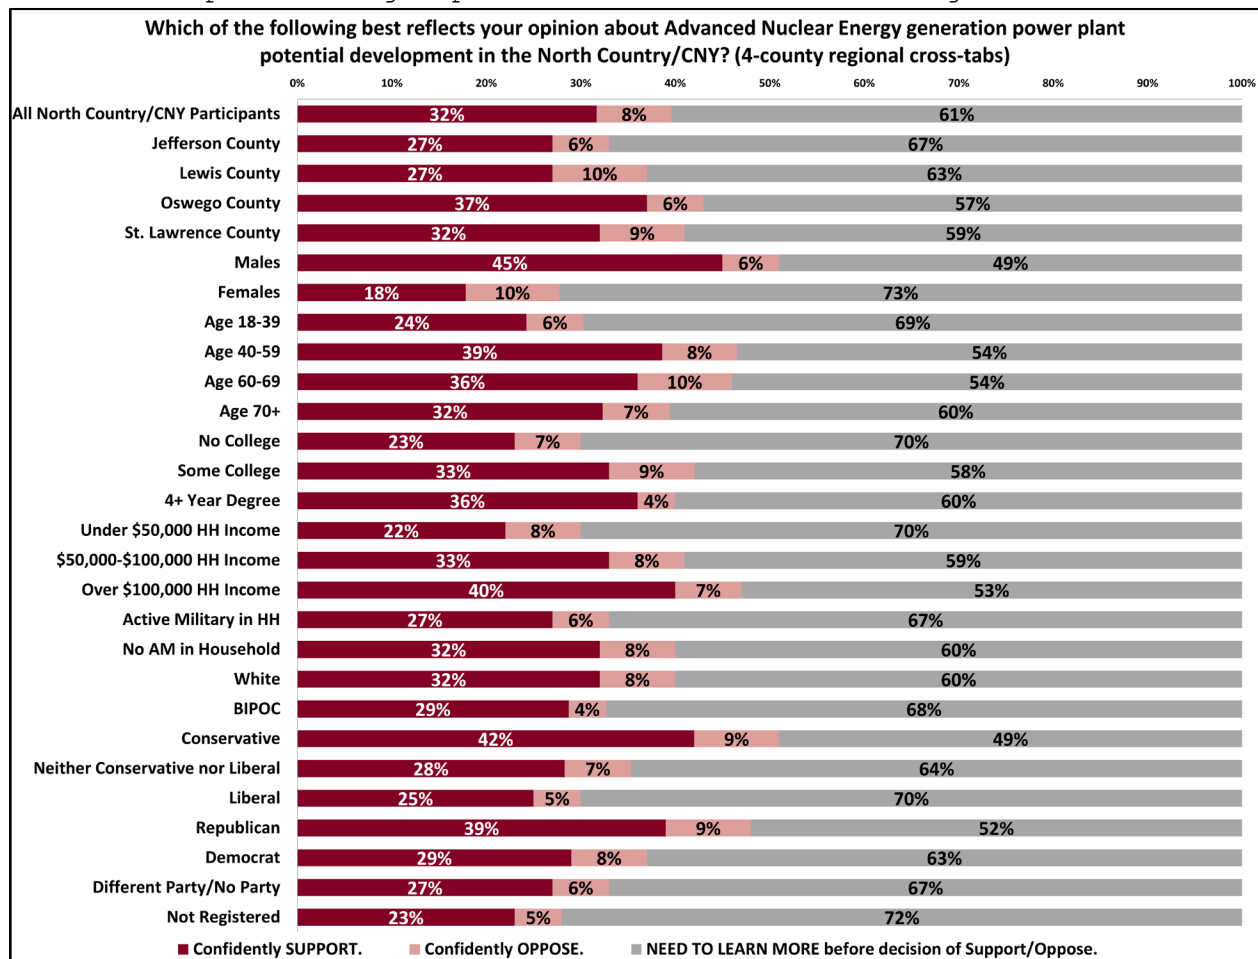

4. Are you familiar enough with Advanced Nuclear Energy technology to confidently know whether you support or oppose the potential future development of these power plants in the North Country (or, "Oswego County", or "the region of NYS that includes your county"), or do you feel that you need to learn more about the technology and its impacts before you could decide whether you support or oppose?

The final survey question in these studies was designed with two goals: (1) identification of the level of desire to learn more about nuclear energy technology, and (2) among those residents who do feel that they know enough about the technology to confidently decide – do you support or oppose potential future development of these power plants in the region that includes your county? Two key findings emerge from the data. First, a majority of adult residents, more than three-in-five in Northern and Central NY (61%), and on a statewide basis (64%), feel that they need to learn more before they could confidently decide whether they support or oppose the future development. Second, among those who feel that they are well enough informed to confidently decide, it is more common that residents are in support rather than in opposition to the development of nuclear power generation plants in the future (by a wide 4:1 ratio in Northern and Central NY, 32% to 8%, respectively, and on a statewide basis by almost a 2:1 ratio 23% to 12%, respectively).

Finally, as illustrated in the following graph for the Northern and Central NY study, it is clear that a majority of residents wish to learn more about Advanced Nuclear Energy before confidently making a personal decision about support versus opposition, and a large majority support for development among those who are already well-informed. These are consistent findings, quite independent of other socio-demographic factors. In other words, often-times in our current society, attitudes and behaviors are very polarized among societal subgroups. In particular, polarization due to political ideology and/or political party is now often-times the rule, rather than the exception when researching public opinion. However, this survey item that investigates familiarity and support for Advanced Nuclear Energy shows very similar findings among all studied subgroups, even among the subgroups of political ideology and political party affiliation that commonly have great divides. As an example, among registered Republicans the majority in Northern and Central NY (52%) indicate that they wish to learn more about Advanced Nuclear

Energy before deciding whether or not they are in support of future development, while among those Republicans who feel confident in their current understanding they are approximately four times more likely to support rather than oppose (39% versus 9%, respectively). Similarly, among registered Democrats the majority (63%) indicate that they wish to learn more about Advanced Nuclear Energy before deciding whether or not they are in support of future development, while among those Democrats who feel confident in their current understanding they are also almost approximately four times more likely to support rather than oppose (29% versus 8%, respectively). The current study data suggests that Alternative Nuclear Energy opinion among Northern and Central New York is one of the rare bipartisan agreement topics in our society in 2025. On a statewide basis, there is noticeably greater support for the development among Republicans than there is among Democrats.

## **Methodology Employed for these Studies:**

Between October 21-25, 2025, a mixed-mode sampling method of contact was employed in this study to complete a total of 2,109 interviews of adult residents of a four-county region in Northern and Central New York. Surveys were completed by 593 Jefferson County residents, 515 Lewis County residents, 472 Oswego County residents, and 529 St. Lawrence County residents. Working under the supervision of the Center for Community Studies research staff in both a physical call center in Watertown and a virtual remote call center, statistics students enrolled at the College and trained in interview techniques completed 505 live interviews via telephone on both the landline and cellular phones of adult residents. An additional 1,511 surveys were completed online, with 629 via random email invitation and 882 via random MMS text message push-to-web invitations to cellular phones. Finally, 93 intercept surveys were completed at Fort Drum to assist in attaining accurate representation of the military-affiliated subpopulation in the sample collected in this study. After sampling, all data were weighted within-county for gender, age, education, military affiliation, and racial background to ensure representativeness of samples within each county, and when generating aggregate region-wide estimates a further weight for county population sizes was applied. The result of this sampling of 2,109 Northern and Central New York residents is an approximate margin of error of  $\pm 2.4\%$  after this weighting sample survey results toward Northern and Central New York population characteristics. County-specific margins of error are approximately  $\pm 5\%$  due to smaller within-county sample sizes.

Between November 6-8, 2025, text message push-to-web sampling methodology was employed to complete a total of 972 interviews of adult residents of New York State. After sampling, all data were weighted for gender, age, education, geography/region, and racial background to ensure representativeness of the sample. The result of this statewide sampling of 972 residents is an approximate margin of error of  $\pm 3.8\%$  after this weighting sample survey results toward New York State population characteristics.

The full reports of socio-demographic analyses for each of the Advanced Nuclear Energy survey questions in each of these two studies are included as separate files.

## **Final Comments and Acknowledgements:**

This Northern and Central NY Advanced Nuclear Energy survey has been completed as a subset of the annual omnibus annual survey of the attitudes and opinions of a representative sample of adult residents of the region. This annual survey by the Center for Community Studies has been completed each year in Jefferson County since 2000. The survey expanded to include Lewis County annually in 2007, and further expanded to include St. Lawrence County in 2015. This is the first year of including Oswego County in the regional surveying. The primary goal of the annual survey is to collect data regarding quality-of-life issues of importance to local citizens, and as a result this study provides an annual "snapshot" of life in the region. Additionally, analysis of the 26<sup>th</sup> Annual Survey data provides an information-rich "motion-picture" of changes in the lives of residents over the past two and a half decades when trends are investigated via comparing with earlier-year results. The longitudinal trended data included in this study summarizes results of over 25,000 interviews that have been completed in a total of 57 county-specific surveys of the community in the four counties since 2000. Typically, the results of this large survey study are released in December, after sampling is completed in October. This year an unprecedented early release of the Advanced Nuclear Energy survey results is being employed to facilitate their use in the aforementioned public forum to be held at the College on November 12<sup>th</sup>. The remainder of the longitudinal survey results that have been collected in this omnibus study and an associated full longitudinal report of findings will be released to the public in December 2025, following the normal schedule.

The sponsors of these annual surveys of the Northern and Central New York communities are Jefferson Community College, CarFreshner Inc., the Northern New York Community Foundation, the Development Authority of the North Country, and the Lewis County Board of Legislature, who all provide financial support to assist in the funding of these projects.

The statewide study completed in November 2025 has been funded as a community service by Jefferson Community College, to enrich the public forum to be held on November 12<sup>th</sup>.

# Advanced Nuclear Energy Generation - Adult Community Survey

Jefferson, Lewis, Oswego, St. Lawrence Counties, New York (Sampling October 21-25, 2025)

## Socio-demographic Cross-tabulations

The Center for Community Studies at Jefferson Community College

Watertown, New York

	Intercept Survey at Fort Drum	6%	21%	0%	0%	0%
Sample Size		2,109	593	515	472	529

This annual community survey was conducted by the Center for Community Studies at SUNY Jefferson October 21-25, 2025, among 2,109 adult residents of Jefferson, Lewis, Oswego, and St. Lawrence Counties, New York. Of the 2,109 respondents, 505 live interviews were completed via telephone on both the landline and cellular phones of adult residents, an additional 1,511 surveys were completed online, with 629 via random email invitation using a nonprobability panel, and 882 via random MMS text message push-to-web invitations to cellular phones using L2 as the provider. Finally, 93 intercept surveys were completed at Fort Drum, NY to adequately represent the military-affiliated. Data from collection modes were weighted within-county to balance sample demographics to match estimates for New York State's population using data from the Census Bureau's 2023 U.S. American Community Survey (ACS), and the Department of Defense base population statistics, on: age, race/ethnicity, education, military-affiliation, and gender to ensure representativeness. For four-county regional estimates an additional weight for county population size was employed. The study has an overall margin of error of +/- 2.4 percentage points including the design effects resulting from weighting. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll. The Center for Community Studies, directed by Mr. Joel LaLone, conducts public opinion research primarily in Northern NYS. CCS, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices.

# Advanced Nuclear Energy Generation - Adult Community Survey

Statewide in New York State (Sampling November 6-8, 2025)

## Socio-demographic Cross-tabulations

The Center for Community Studies at Jefferson Community College

Watertown, New York

November 11, 2025

NOTE: Statistics in the same row of any subtable that do not share a subscript are statistically significantly different (p<0.05), while those that do share a subscript are not significantly different.

	Republican	23%
	Democrat	49%
	Other Party or No Party or Not Sure of Party	23%
	Not Registered	6%
2024 Presidential Election Vote Choice (among those who voted)		
	Donald Trump	40%
	Kamala Harris	60%
Sample Size		2,109

This survey was conducted by the Center for Community Studies at SUNY Jefferson November 6-8, 2025, among 972 adult residents of New York State. All 972 respondents were contacted by text messages with survey links included using cellular phones provided by Aristotle. Data were weighted to balance sample demographics to match estimates for New York State's population using data from the Census Bureau's 2023 U.S. American Community Survey (ACS): age, region in state, race/ethnicity, education, and gender to ensure representativeness. The study has an overall margin of error of +/- 3.8 percentage points including the design effects resulting from weighting. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll. The Center for Community Studies, directed by Mr. Joel LaLone, conducts public opinion research primarily in Northern NYS. CCS, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices.

# Nuclear Energy Public Forum

Wednesday, November 12, 2025

6:00-8:00 PM

Sturtz Theater, JCC, Watertown, NY

# *Housekeeping*

## The organization of this event:

### Itinerary

1. Welcome, Dr. Daniel Dupee, President, SUNY Jefferson (6:00-6:05)
2. Public Opinion Research Results, Mr. Joel LaLone, Director, Center for Community Studies (6:05-6:20)
3. Expert Panelist Educational Presentations, 5 minutes each (6:20-6:50)
4. Public Q/A (6:50-8:00)
  - a. From early-online registration submissions
  - b. From this evening's audience

### Public Q/A

1. All questions must be submitted by one of these **three methods**:
  - a. During the online preregistration process.
  - b. Via the QR Code on the program and posters using the Slido App.
  - c. Hand-written, submitted by raising hand and CCS Staff & Students will retrieve from you.

*\*\*\*There will be no open mic to pose questions aloud live this evening.*
2. Expert panelists will answer questions.
3. ALL questions will be answered either live tonight, or via email soon thereafter.

# *Center for Community Studies – Mission*

*The Center for Community Studies at Jefferson Community College supports and facilitates a wide range of community-building and educational activities that engage the community. In collaboration with community partners, The Center conducts unbiased **community-based research** and provides a **forum** for the productive discussion of ideas and issues of significance to the community.*

# Center for Community Studies – History

## Community-Based Research

The Center for CS has completed over 200 public opinion research survey-based studies over the past 26 years. CCS is a member of both AAPOR and AASRO and uses industry standard best practices methods of data collection and methods of data analysis.

## Public Forums

In collaboration with an Advisory Board of community leaders from throughout NNY, the Center for CS has continuously offered speakers and panels free to the public. This evening is the latest offering.

# *Recent Public Opinion Research – Completed in 4- County NNY/CNY, and NYS Statewide*

## **Four-County NNY/CNY Survey Study (n=2,109)**

Eleven nuclear energy-related survey questions were included in the omnibus portion of the annual quality-of-life and community issues survey of NNY/CNY counties that is completed each October. Data collected October 21-25, 2025. This study is annually funded by NNYCF, DANC, Lewis County Legislature, and JCC. (weighted for Sex, Age, Education, Geography, Military, Race; including Design Effect, resulting regional Margin of Error of  $\pm 2.4\%$ )

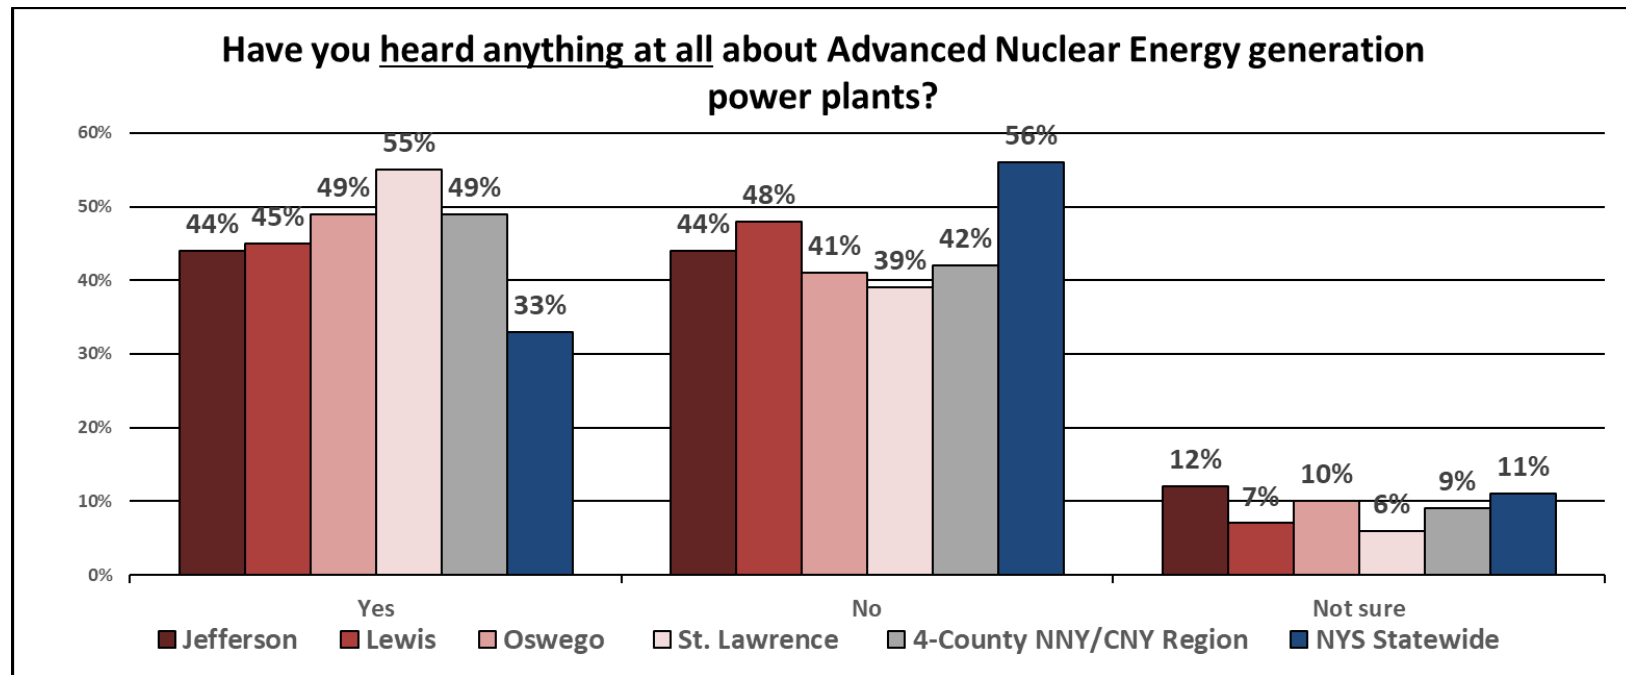

## **NYS Statewide Survey Study (n=972)**

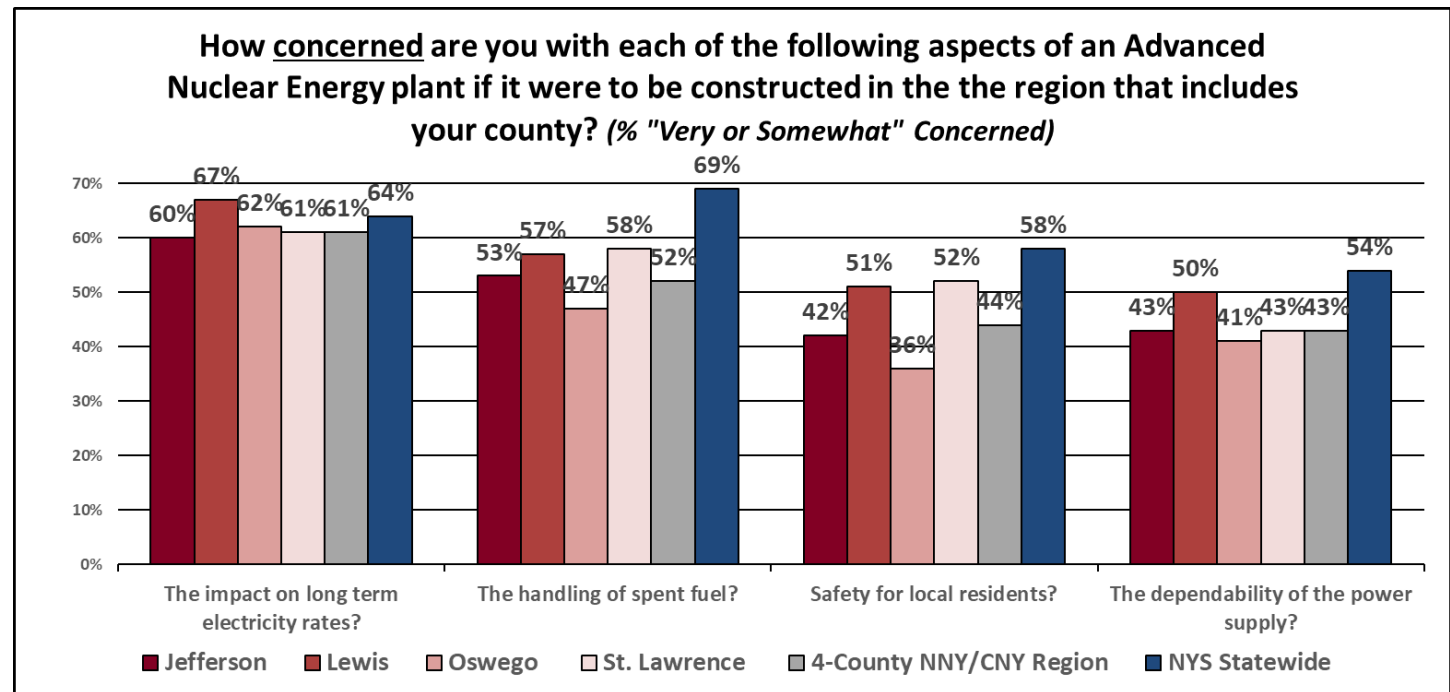

The same quality-of-life and community issues survey instrument described and used above was fielded throughout the entirety of NYS, with participants from every one of the 62 counties in NYS. Data collected November 6-8, 2025. This study has been funded by JCC as a community service. (weighted for Sex, Age, Education, Geography, Race; including Design Effect, resulting statewide Margin of Error of  $\pm 3.8\%$ )

*Survey Results*  
*Measuring Public Opinion*  
*Locally and Statewide*

# *Familiarity* with New Advanced Nuclear Power Generation Technology

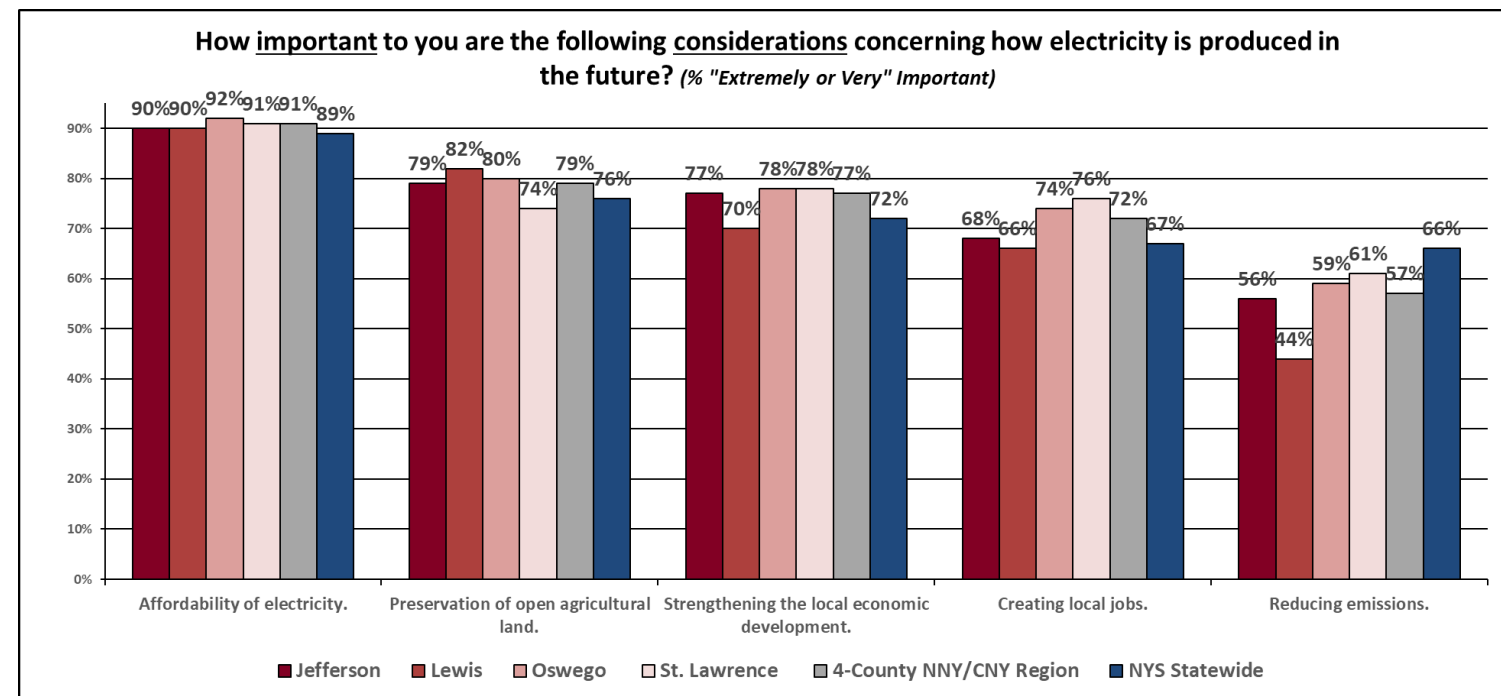

# *Concerns* with New Advanced Nuclear Power Generation

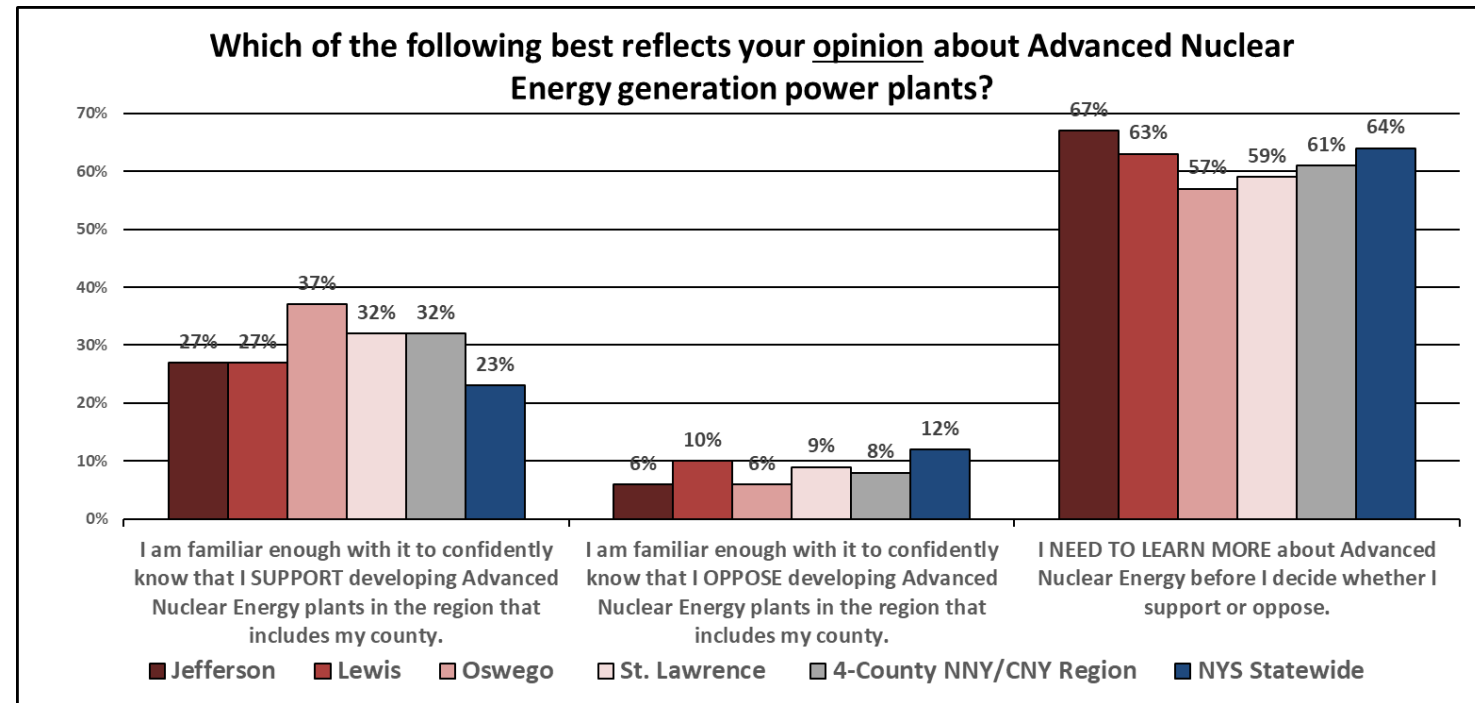

# *Importance of Other Considerations* with Advanced Nuclear Energy Power Generation

# *Interest in Learning More* about New Advanced Nuclear Power Generation Technology

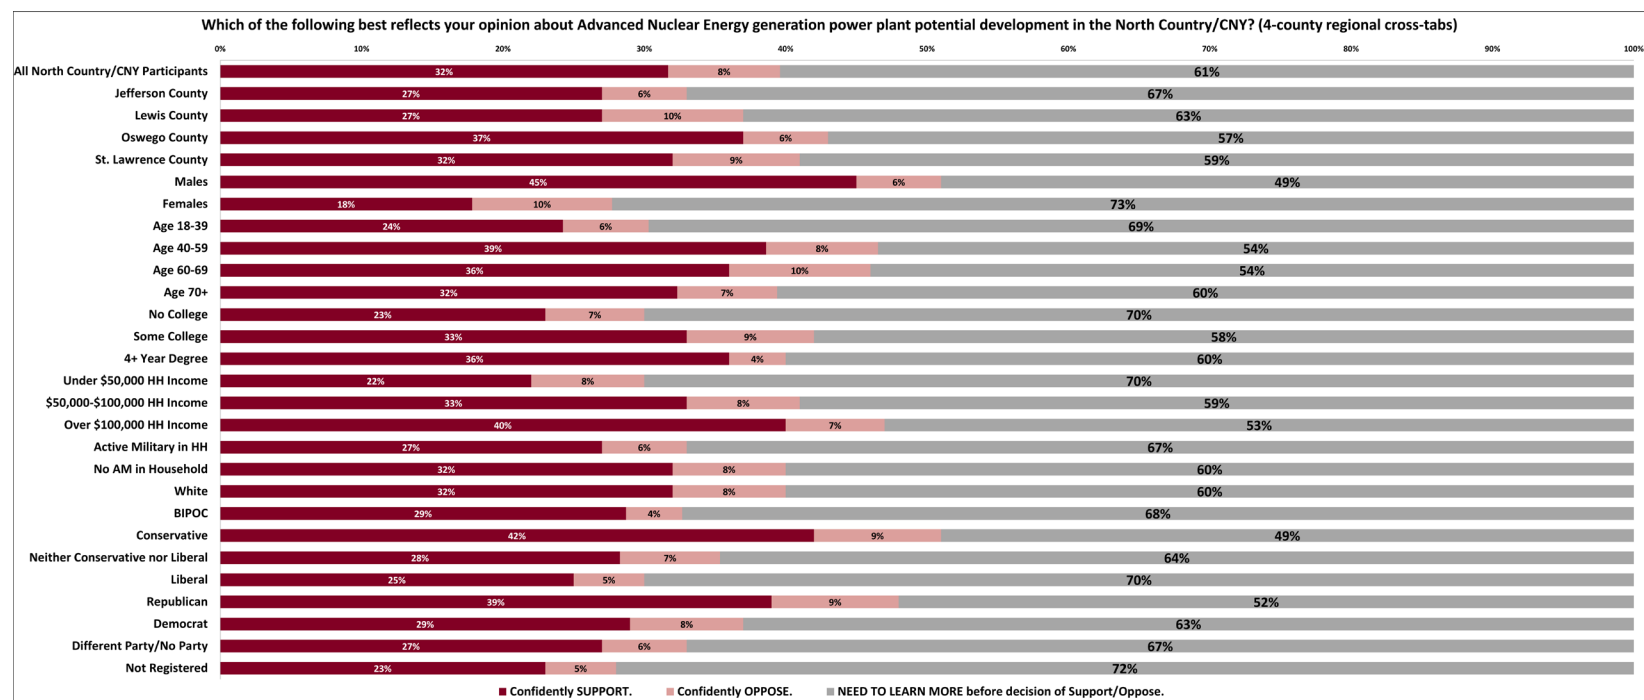

*Digging Deeper* Every survey question, in each study, has been cross-tabulated by key socio-demographics (geography, gender, age, education, political ID, etc.)

Table 6 – Jefferson, Lewis, Oswego, St. Lawrence Counties		All Study Participants	In which county do you reside?				Gender		Age Groups				Education Level			Income Level			Military Affiliation		Racial Background		Political Beliefs (Ideology)			Political Affiliation (Party)			
		NNY in Oct. 2025	Jefferson	Lewis	Oswego	St. Lawrence	Man	Woman	18-39	40-59	60-69	70+	HSG	Some College	4+ YD	Up to \$50,000	\$50,001-\$100,000	Over \$100,000	Yes, AM in HH	No AM in HH	White	BIPOC	Conservative	Neither	Liberal	Republican	Democrat	Different Party/ No Party	Not Registered
Regarding Advanced Nuclear Energy generation, how important is - Affordability of electricity?	Extremely important	60%	64% <sub>a</sub>	60% <sub>a,b</sub>	57% <sub>b</sub>	59% <sub>a,b</sub>	58% <sub>a</sub>	62% <sub>b</sub>	59% <sub>a</sub>	67% <sub>b</sub>	61% <sub>a,b</sub>	48% <sub>b,c</sub>	58% <sub>a,b</sub>	63% <sub>a</sub>	56% <sub>b</sub>	61% <sub>a</sub>	61% <sub>a</sub>	60% <sub>a</sub>	66% <sub>a</sub>	60% <sub>a</sub>	61% <sub>a</sub>	59% <sub>a</sub>	63% <sub>a</sub>	60% <sub>a</sub>	56% <sub>a</sub>	62% <sub>a</sub>	58% <sub>a</sub>	60% <sub>a</sub>	65% <sub>a</sub>
